Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Election/Restrictions

Applicant's election with traverse of Group I, Claims 1-6, 19 and 20 in the reply filed on 7/23/07 is acknowledged. The traversal is on the ground(s) that there is no burden to the Examiner because of our powerful electronic search engines to quickly and easily search all the claims. This is not found persuasive because distinct inventions exist as described in the restriction of 6/25/07.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by Gowens.

In regard to claims 1 and 6, the Gowens reference discloses A "refueling receiver" (Figure 5) comprising: an "inlet" configured to receive a "nozzle" (Figure 3); a "control valve piston" 48 connected to said inlet to allow flow from said inlet to said control valve piston, said control valve piston having an "inlet side" (i.e., prior to the valve) and an "outlet side" (i.e., post valve); an outlet comprising an "outlet fitting" 46

and a "return fitting" 47, said outlet fitting connected to said inlet to allow flow from said inlet to said outlet fitting, and said return fitting connected to said outlet fitting to allow flow from said outlet fitting to said return fitting; and a "pilot valve" 64 in communication with said return fitting to control a pressure differential between said inlet side and said outlet side to move said control valve piston into a first position to allow flow out of the receiver, and a second position to prevent flow from leaving the receiver.

Allowable Subject Matter

Claims 19 and 20 are allowed.

Claims 2-5 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited prior art pertains to various devices similar in structure to that of the Applicant's device.
